ORTHOPEDIC TRAINING LOG BOOK

PREPARED BY DR:

NAME:

TRAINING CENTER:

REGISTRATION NO:

Content:

- Surgical Record
- 20 major cases
- Academic activities and events, including ongoing lectures at the training center
- Scientific research is attached to this record in the form of a separate booklet according to the design desired by the applicant.

Surgical Records:

It contains tables:

- The information requested in these tables is filled in sequence by date
- Surgical specialty, meaning the period of time spent by a trainee in one of the specialties of surgery (general surgery, emergency, orthopedic surgery ...)
- The type of operation is intended to mean whether this operation is emergency or otherwise and in the case of emergency operations the letter E is mentioned before it
- Place a sign (Y) in the field that indicates your role in the operation as a primary surgeon, first assistant surgeon, or second
- The signature of the consultant is intended to sign the surgeon responsible for the patient
- The trainee should provide a summary of the number of surgeries required according to the manual at the end of each training period, with his role as a surgeon or assistant

20 MAJOR CASES

The major clinical condition is a report on the condition of a surgical condition, which is seen, studied, and treated by the attending physician himself or with his participation or supervision. In this case, the patient must be studied and discussed well, scientifically and academically so that he begins to narrate the patient's story and the positive aspects clinically, verbally and radically, and then discuss the diagnostic possibilities and the plan of treatment and management and follow-up to the end. The case report should not exceed two medium and medium size Head of department and supervisor of training.

Conferences, seminars and scientific activities

The trainee must put it sequentially according to the schedule and according to the type of effectiveness
And to provide proof of attendance at scientific conferences

Scientific Research (TRUE WORK AND RESULTS AND NOT COPIED FROM TEXTBOOKS.)

It should include the main components of research such as introduction, methods of research, results, conclusion and discussion, with reference to the accredited references, noting that the trainee, the research provider, should have a major role in the research.

This research is presented separately in the booklet and according to the design desired by the trainee
